

TrafficWeb | Web based analytics

A web based tool for traffic data collection and analysis

Modern insight

Get more out of your traffic data with the web based analytics tool TrafficWeb from Sensebit. With a clear overview of your collection points and interactive reports, you can better understand your traffic and its development. TrafficWeb has a modern user friendly interface that works both on your laptop and tablet. Invite your colleagues to view results or create elegant reports for that next meeting with just a few clicks.

Web based

With a web based analytics tool you can access your data and initiate measurements on any computer or mobile device.

Interactive

With interactive charts you can get the information you need instantly. No need to ask anyone for that report.

Mobile

Access data, reports and initiate measurements from wherever you want with your smartphone or tablet.

User friendly

TrafficWeb is built to be user friendly so that you can focus on understanding your traffic rather than the interface.

What can it do for me?

Help you understand your traffic and share your insights.

Overview

Keep track of your collection points.

Reports

Create traffic reports with a few clicks.

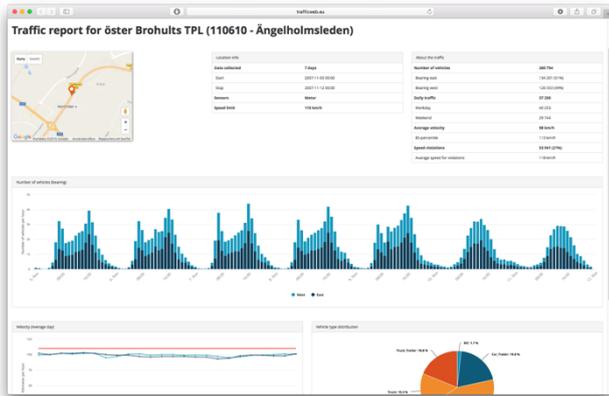

Share

Invite colleagues and share insights.

Collect

Collect data with compatible equipment.

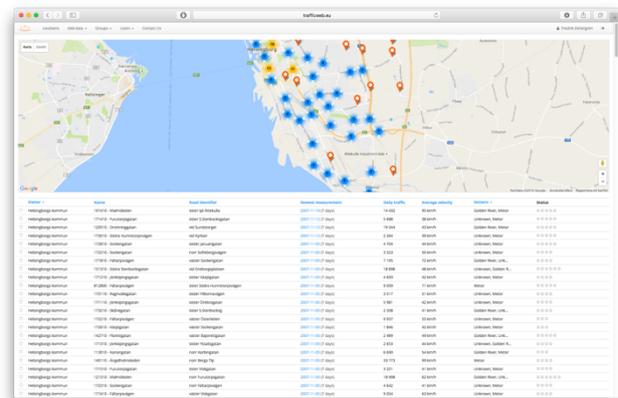

Interactive reports

With interactive reports you can get the information you need when you need it. Whether you need to know the average speed of heavy trucks or when the number of cars with trolleys peak during the day, you can get it with a few clicks.

Clear overview

All your measurement locations are displayed in an interactive map where you quickly can get an overview of what's going on. Which locations are being measured right now? What's the road temperature on the main highways? Are any sensors running out of battery or having problems with the connection? It's all here in your web browser.

“TrafficWeb helps our customers to understand their traffic”

- Mats Hagström, CEO Trafikia
